## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-29 are allowed.

The following is an examiner's statement of reasons for allowance: The art of record does not disclose, nor would it be obvious to modify the art of record so as to include the limitations, in combination with other limitations, a system in which each of the tributary payloads includes an ordered set of input columns that are interleaved within a payload of input data stream. The read controller, in parallel with write controller, causes the input columns from the common buffer to be read to the output columns of the output data stream according to the read pointer. For each of the output columns, the read pointer selects an input column from a limited portion of the common buffer that contains a set of input columns that are switchable in time to the corresponding output column and maintain the order of the columns within each of the tributary payloads.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Huch et al. US 6,421,770 B1 discloses buffer configuration management.

Upp 4,998,242 discloses Virtual Tributary Cross Connect Switch

Eom et al. 5,914,952 disclose Tributary Unit signal cross connection apparatus

Bansal et al. US 6,650,637 B1 disclose a Multi-port RAM based Cross-Connect system.
